Nunc quis urna dictum turpis accumsan semper.

Here is a citation by [Chow and Liu \(1968\)](#). It is also possible to cite indirectly ([Pearl, 1988](#)).

Acknowledgments and Disclosure of Funding

All acknowledgments go at the end of the paper before appendices and references. Moreover, you are required to declare funding (financial activities supporting the submitted work) and competing interests (related financial activities outside the submitted work). More information about this disclosure can be found on the JMLR website.

Appendix A.

In this appendix we prove the following theorem from Section 6.2:

Theorem 1 (discrete). *Let u, v, w be discrete variables such that v, w do not co-occur with u (i.e., $u \neq 0 \Rightarrow v = w = 0$ in a given dataset \mathcal{D}). Let N_{v0}, N_{w0} be the number of data points for which $v = 0, w = 0$ respectively, and let I_{uv}, I_{uw} be the respective empirical mutual information values based on the sample \mathcal{D} . Then*

$$N_{v0} > N_{w0} \Rightarrow I_{uv} \leq I_{uw}$$

with equality only if u is identically 0.

Proof. Left to the reader. ■

Appendix B. More Proofs

We now prove the theorem from Appendix A.

Proof of Theorem 1. We use the notation:

$$P_v(i) = \frac{N_v^i}{N}, \quad i \neq 0; \quad P_{v0} \equiv P_v(0) = 1 - \sum_{i \neq 0} P_v(i).$$

These values represent the (empirical) probabilities of v taking value $i \neq 0$ and 0 respectively. Entropies will be denoted by H . We aim to show that $\frac{\partial I_{uv}}{\partial P_{v0}} < 0 \dots$ ■

Remainder omitted in this sample. See <http://www.jmlr.org/papers/> for full paper.
